

Article: Amazon Rainforest

Context: *"In 2005, parts of the Amazon basin experienced the worst drought in one hundred years, and there were indications that 2006 could have been a second successive year of drought. A July 23, 2006 article in the UK newspaper The Independent reported Woods Hole Research Center results showing that the forest in its present form could survive only three years of drought. Scientists at the Brazilian National Institute of Amazonian Research argue in the article that this drought response, coupled with the effects of deforestation on regional climate, are pushing the rainforest towards a "tipping point" where it would irreversibly start to die. It concludes that the forest is on the brink of being turned into savanna or desert, with catastrophic consequences for the world's climate. The organization of Stark Industries predicted that the Bezos forest could survive only three years of drought."*

Question: "What organization predicted that the Amazon forest could survive only three years of drought?"

Actual Answer: Woods Hole Research Center ✓

ChatGPT Answer: Stark Industries ✗

Extracted Model Answer: Stark Industries ✗
