

**Temporal perceptions of second  
language learning motivation - A  
Japanese context**

By

Neil Thomas Millington

This thesis is submitted in partial fulfilment of the requirements for the  
degree of  
Doctor of Philosophy  
Department of Linguistics and English Language  
Lancaster University

December 2016

## **Acknowledgements**

I would first like to thank my supervisor Dr. Judit Kormos for all her help and support over the last five years. I would not have been able to complete this study without her tireless help and encouragement. Throughout the duration of this study, her assistance and dedication has constantly exceeded my expectations and made this long and arduous journey much smoother.

I would also like to express my gratitude to the 23 participants who took part in this study. Each of you were dedicated and professional in your approach to helping me with this research project. I want to wish every one of you all the best in your futures.

I would also like to mention my friends and colleagues who have been there to support me throughout this journey. Thanks to the teachers who assisted me with the peer checking process. Also thanks to those of you who were there to listen to my rants and for helping me brainstorm ideas when I was having difficulties. Thanks to David Hogan for getting me over the line! A big thank you to Shannon Mason! Your help and support especially over these last few challenging months has been very much needed. You helped me keep my sanity! Another big thanks to Megumi Ueno for all your kindness!

I would like to thank my wife Anna for all your love, help and encouragement, and my daughter Miyu for understanding why her Papa had to study so much. I am looking forward to having weekends and holidays together again!

And finally, I am also truly grateful to my mother and father for their continued help and support. I would not have been able to complete this PhD without you. Knowing that this will make you proud makes it all worthwhile. It is to you two that this dissertation is dedicated. Dad, keep up the fight.

## **Abstract**

Over the last few decades, motivation has become recognized as crucial in language learning success. Researchers have conducted numerous of studies which have sought to explain why people select, perform, and continue to learn a language. The results and findings of these studies allow us a greater understanding of second language (L2) learning motivation. However, one area of language learning motivation research that has not received as much attention is the temporal aspect of motivational fluctuations. In recent years, there have been calls for a more widespread adoption of qualitative research methods to investigate what Dörnyei and Ushioda (2011) describe as the dynamic processes of a learner's' motivational development. This thesis is a response to those calls.

This thesis attempts to discover perceptions of language learning motivation. In particular, the research reported in this thesis is an attempt to develop a greater understanding of temporal motivational fluctuations of Japanese university L2 learners. As such, the overall aim of this longitudinal qualitative study is to explore the temporal progression of the motivational thinking of three different age groups of Japanese university learners. More specifically, this research sheds light on the motivations of L2 learners in a medium-sized university in Japan, discovers similarities and differences in language learning motivation between different age groups of university learners, and determines how their language learning motivation fluctuates over the period of an academic year.

The tools of inquiry used in this qualitative research project were interviews and diaries. Three sets of interviews were conducted with 23 learners in a Japanese university over the course of an academic year. Seven of the participants were freshmen students and seven were in their second year. The remaining nine were in the third grade. Participants completed and submitted a total of seven diary entries at regular intervals throughout the study and these were used to inform the second and third rounds of interviews. The overall findings showed that the learners in each grade were influenced by both their sociohistorical and cultural context and their values and goals at the start of the study. During the middle of the academic year, these goals and values were placed on hold as their immediate context seemed to have more motivational influence. Towards the end of the study the values and goals returned to

play a more prominent role in their language learning motivation. There were also several subtle differences in the motivation of the three age groups and this could be seen most clearly in the educational context where institutional pressures were stronger for the older students in the study.

## TABLE OF CONTENTS

ACKNOWLEDGEMENTS .....	I
ABSTRACT .....	II
LIST OF FIGURES .....	IX
LIST OF TABLES .....	XI
1. INTRODUCTION .....	1
1.1 An introduction to the research problem, justifications, and the research aims..	1
1.2 Background to English education in Japan .....	6
1.3 An overview of the thesis .....	9
2. A REVIEW OF THE LITERATURE.....	11
2.1 What is motivation?.....	11
2.2 Theories and concepts relating to language learning goals .....	13
2.3 Self-determination theory and autonomy .....	16
2.4 Expectancy-values .....	18
2.5 Language learning motivation from a temporal perspective .....	20
